# Managing your ENiQ® Security Ecosystem

EASYFLEX | TRANSPONDER

## EasyFlex | Transponder

Manage and organise your system through transponders, without any software or app.

You can have a multitude of options by using the ENiQ® software to programme your ENiQ® Security Ecosystem. However, when you really don't need that much detailed control and insight, it could be a lot easier to simply programme your ENiQ® devices using special programming cards.

Simply install your ENiQ® digital locking solutions, use the Master card to activate the lock and transponders and you are set!

No software or any further hardware required, this is a true plug and play solution, perfect for smaller business

or for use at home. Also, if you do like to expand your system, you can quickly add more transponders or seamlessly switch to controlling your system via software, as your ENiQ® devices have full communication capabilities built in.

## Benefits

- Cost-efficient; create your access control system without having to invest in PC's or software.
- Easily install the cylinders yourself with the dedicated tools that come in the box.
- Adding more users to the system is as easy as simply ordering extra EasyFlex booklets. You can easily delete lost or stolen transponders from the system so that you will have no unwanted guests after closing time.
- ENiQ® evolves with you: start with the booklets and move on to Access Management software at any time you prefer.

## Using EasyFlex

The EasyFlex programming method is perfect for smaller buildings, with only a few doors and users.

The EasyFlex booklet consists of transponders with a unique activation and deactivation card for each transponder. Programming a cylinder is a simple matter of holding the programming card of the specific transponder against the cylinder. The cylinder now grants access to that card, until

it's deactivated again, by holding the deactivation card against the cylinder.

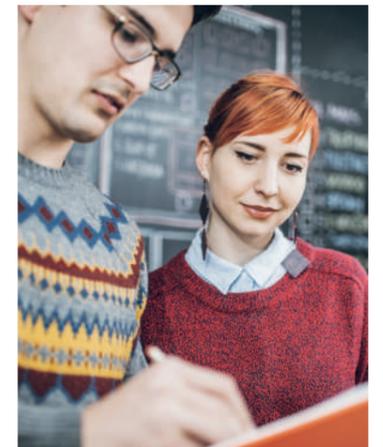

Suppose one of the users loses his/her transponder. Simply hold the deactivation card of that transponder against the cylinders it had access to, to withdraw the privileges of that transponder.

Now select a new transponder and hold its activation card against the cylinders. With the new transponder, the user once again has all access privileges as before, and the lost transponder is now rendered useless, so it cannot be used anymore. After some years of use, one of the cylinders

All the benefits of digital security, but without software or wires.

Perfect for smaller businesses or at home.

might give a different flashing signal. No worries! It means the battery needs replacement. Of course, the cylinder shows this well in time, so there is plenty of time to order new batteries. If you can replace the batteries of your TV remote control, you can replace

them in our ENiQ® cylinder. It can be done from the outside, so you will never get locked out. After replacing the batteries, your cylinder is ready again for another couple of years, no need to reprogram it.

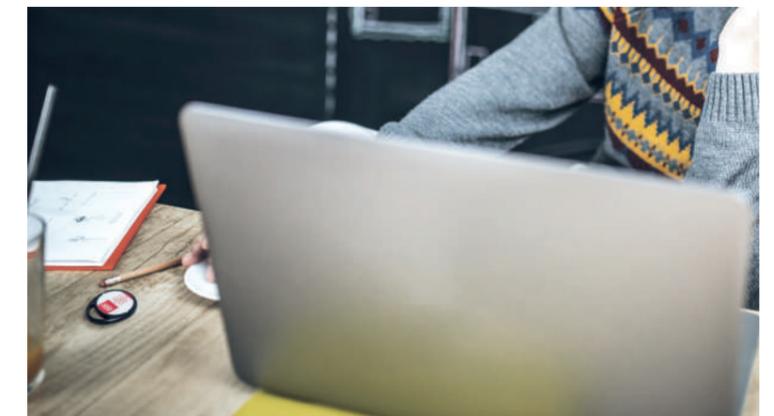

Activate a transponder by holding its card against the lock.

### Using EasyFlex

- Smaller buildings
- Few access points
- Few users
- No software needed
- No network needed

Want to add more transponders? Simply get another booklet.

Seamlessly upgrade to ENiQ® software whenever you want.

## The many benefits of going digital

Three important advantages of digital solutions.

When it comes to security systems, your main options are either digital or mechanical solutions. So why choose a digital security system? When compared to mechanical systems, three main benefits set digital solutions apart:

### CONTROL

Your digital ENiQ® devices store and share all sorts of data, giving you more (real-time) insights in your organisation, as well as giving you a far greater level of control over your security system.

### FLEXIBILITY

Making changes in your digital security system does not require a specialist to create new keys or locks: you can easily create as many new transponders as you like or add new devices as your needs change. A lost key also no longer requires you to change locks anymore: simply press a button and your system is secure again.

### EASE OF USE

Every solution in your ENiQ® system is designed to be as close to 'plug and play' as possible, with simple installation processes and programming methods. They are also very easy to operate in everyday use. So, no matter how layered your security protocols might be, it can be as simple for users as only having to hold a transponder against a wall reader.

### DOM Update

DOM Update is a smartphone application for your ENiQ® products. Its' sole purpose is to update the firmware of your digital locking devices. Therefore, eliminating the need for complex software.

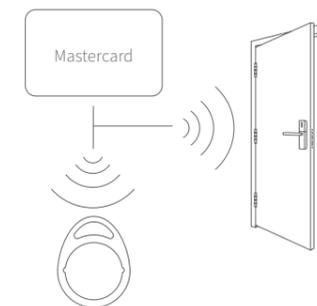

## Programming methods

Grant a change in access privileges, manage user groups, review events.

With the ENiQ® EasyFlex booklets, you can create a basic but thorough security system that does exactly what you need it to do. If you would like more options and insights in your ENiQ® Security

Ecosystem, you can download the ENiQ® App and open up a wide selection of additional programming features and automation options. Your ENiQ® devices have full connectivity capabilities built-in,

so you are instantly ready to take your system to a whole new level of control. You could even go a step further by using one (or all) of the software programming methods. The choice is yours!

### Programming method Easyflex

1. Authorize the transponder with the mastercard from the Easyflex box.
2. Give transponder to user.
3. Person can now open the door.

### EasyFlex in a nutshell

#### 1. INSTALLATION

No cables needed for most products. Plug & Play.

#### 2. SOFTWARE

No software needed. ...but you can seamlessly switch to software at any time. Be in full control. No need for a

key safe anymore. Worrying about your master key system is a thing of the past.

#### 3. MANAGEMENT EXPERIENCE

You are in full control of who has access to what areas, at what time and for what period.

#### 4. USER EXPERIENCE

Users can access anything they need to in your building, but cannot enter rooms they should not be in. This feels safe, without feeling restricted in movement.

# A seamless ecosystem of solutions

Create tailor-made security for your situation.

DOM ENiQ® offers different ways of managing your security system, which gives you the freedom to create a security experience that best suits your organisation. Whatever way you

choose to manage and organise your system, it will always work seamlessly with your entire ENiQ® ecosystem.
